

## Computer Science 10th Class English Medium Online Test

A box B. block C. list D. job  A nested B. boxed C. repeated D. decomposed  A condition can be any expression:  A a "A c = 0 B. c % a = 0 C. a"c = 0 D. a+c = 0 D. a+c = 0 D. a+c = 0  A program crashes B. index out of bound error C. further code executes			
A set of multiple instructions enclosed in braces is called a	Sr	Questions	Answers Choice
2 An if statement inside another if statement is called structure:  B. boxed C. repeated D. decomposed  C. logical D. decomposed  A arithmetic relational C. logical D. decomposed  Which of the following is the condition to check a is a factor of c?  A a % c == 0 B. c % a == 0 D. a c == 0 D. a	1	A set of multiple instructions enclosed in braces is called a:	B. block C. list
A condition can be anyexpression:  B. relational C. logical D. arithmetic, relational or logical D. arithmetic D. aric = 0  A a 4+; B. a-; C. both (a) and (b) D. none  In if statement, what happens if condition is false?  A program crashes B. index out of bound error C. further code executes: D. compiler asks to change condition  7. a statements describe the sequence in which statements of the program should B. conditional C. control D. all  8. Conditional logic helps in,:  A decision B. iterations C. control D. all  9. How many types of logical operators?  A 3 B. 1 C. 4 D. 2  10. Which is a combination of backslash (t) and a code character to control printing of data on the screen?  A precedence B. furnat specified C. sequence D. printing  A precedence B. rule C. sequence C. sequence D. random  A unary B. binary C. temary	2	An if statement inside another if statement is called structure:	B. boxed C. repeated
4 Which of the following is the condition to check a is a factor of c?  C a'c == 0 D. a+c	3	A condition can be any expression:	B. relational C. logical
5 Question Image  B. a; C. both (a) and (b) D. none  6 In If statement, what happens if condition is false?  A program crashes B. index out of bound error C. further code executes D. compiler asks to change condition  7 astatements describe the sequence in which statements of the program should be executed:  8 Conditional logic helps in,:  Conditional logic helps in,:  A decision B. iterations C. traversing D. all  9 How many types of logical operators?  A 3 B. 1 C. 4 D. 2  10 Which is a combination of backslash (\) and a code character to control printing of data on the screen?  A precedence B. format specified C. character D. printing  A precedence B. rule C. sequence D. random  11 Which operator requires three operands respectively to perform the operation?  A unary B. binary C. termary	4	Which of the following is the condition to check a is a factor of c?	B. c % a == 0 C. a*c == 0
8. index out of bound error C. further code executes D. compiler asks to change condition  7. astatements describe the sequence in which statements of the program should be executed:  8. Conditional logic helps in,	5	Question Image	B. a; C. both (a) and (b)
statements describe the sequence in which statements of the program should be executed:  8 Conditional logic helps in,:  A decision B. iterations C. traversing D. all  9 How many types of logical operators?  Which is a combination of backslash (\(\)) and a code character to control printing of data on the screen?  A precedence B. format specified C. character D. printing  A precedence B. rule C. sequence D. random  10 Which operator requires three operands respectively to perform the operation?  A unary B. binary C. termary	6	In If statement, what happens if condition is false ?	B. index out of bound error
8 Conditional logic helps in,:  9 How many types of logical operators?  10 Which is a combination of backslash (\) and a code character to control printing of data on the screen?  11 Which of the following tells about which operations should be performed first?  2 Which operator requires three operands respectively to perform the operation?  2 Restations C. traversing D. all  A. 3 B. 1 C. 4 D. 2  A. escape sequence B. format specified C. character D. printing  A. precedence B. rule C. sequence D. random  A. unary B. binary C. ternary	7		B. conditional C. control
9 How many types of logical operators?  10 Which is a combination of backslash (\) and a code character to control printing of data on the screen?  A. escape sequence B. format specified C. character D. printing  A. precedence B. rule C. sequence D. random  Which operator requires three operands respectively to perform the operation?  A. unary B. binary C. ternary	8	Conditional logic helps in,:	B. iterations C. traversing
Which is a combination of backslash (\) and a code character to control printing of data on the screen?  B. format specified C. character D. printing  A. precedence B. rule C. sequence D. random  Which operator requires three operands respectively to perform the operation?  A. unary B. binary C. ternary	9	How many types of logical operators ?	B. 1 C. 4
Which of the following tells about which operations should be performed first?  B. rule C. sequence D. random  A. unary B. binary C. ternary	10		B. format specified C. character
Which operator requires three operands respectively to perform the operation?  B. binary C. ternary	11	Which of the following tells about which operations should be performed first?	B. rule C. sequence
	12	Which operator requires three operands respectively to perform the operation?	B. binary C. ternary
