

## Biology FSC Part 2 Chapter 15 Online MCQ's Test

| Sr | Questions  | Answers Choice   |
|----|--|--|
| 1  | Abdomen has a peritoneal cavity, lined by a thin epithelium called.                                  | A. ectoderm<br>B. endoerm<br>C. Peritoneum<br>D. Epidermis   |
| 2  | Hemodialysis means   | A. Removing the blood<br>B. Cleaning the blood<br>C. Storing the blood<br>D. diluting the blood            |
| 3  | The incidence of calcium oxalate type stones are.  | A. 40%<br>B. 50%<br>C. 60%<br>D. 70%   |
| 4  | High degree of renal failure is also called as.  | A. uremia<br>B. Leukemia<br>C. Anemia<br>D. Lithotripsy  |
| 5  | None surgical removal of kidney stone is called.   | A. Dialysis<br>B. lithotripsy<br>C. Uremia<br>D. Kidney transplant   |
| 6  | The active uptake of sodium ions in the loop of Henle is provided by the action of hormone.          | A. Insulin<br>B. Adrenaline<br>C. Aldosterone<br>D. Oxytocin   |
| 7  | ADH affects which part of Nephron.   | A. Walls of collecting duct<br>B. Glomerulus<br>C. Walls of loop of Henle<br>D. Proximal convoluted tubule |
| 8  | the active uptake of sodium in the loop of Henle is provided by the action of hormone                | A. Cortisone<br>B. Testosterone<br>C. Aldosterone<br>D. Progesterone                                       |
| 9  | the reabsorption of water in collecting tubules is under the control of.                             | A. Aldosterone<br>B. ADH<br>C. Pressure filtration<br>D. Tubular secretion                                 |
| 10 | A pair of kidneys, consist of millions of functional units called.                                   | A. Nephrons<br>B. Dendrons<br>C. Neurons<br>D. Flatrons  |
| 11 | Which one of the following structures of kidney is involved in the production of concentrated urine. | A. Glomerulus<br>B. Juxtamedullary nephron<br>C. Cortical nephron<br>D. Vasa recta                         |
| 12 | All the collecting tubules of human kidney finally discharge into the.                               | A. Bowman's capsule<br>B. glomerulus<br>C. Pelvis<br>D. Urethra  |
| 13 | In juxtamedullary nephrons additional capillaries extend down to form at.                            | A. Vasa deferentia<br>B. Vasa efferentia<br>C. Vasa recta<br>D. Vasa hecta                                 |
| 14 | Blood supplied to kidneys from each cardiac beat is.   | A. 10%<br>B. 20%<br>C. 30%<br>D. 50%   |
| 15 | Mammalian kidney including human is adapted to conserve water up to.                                 | A. 69.5%<br>B. 79.5%<br>C. 89.5%<br>D. 99.5%   |

16

Glomerular filtrate are reabsorbed in.

- A. Promimal tubule
- B. Loop of Henle
- C. Distal tubule
- D. Bowman's capsule

17

In each Nephron inner end form a cup shaped swelling called.

- A. Glomerulus
- B. Henle's loop
- C. Bowman's capsule
- D. Pelvis
